

## Quick Launch Charts

Many organizations have a good story to tell, but don't tell a good story. Quick Launch (QL) Charts help.

### What are Quick Launch Charts?

QL Charts are a robust, yet flexible portfolio of graphical displays **not** available in Excel's Chart Wizard or PowerPoint's Design Templates. QL Charts are designed to allow managers and staff to produce meaningful charts with ease – to analyze data, show accountability, and communicate success.

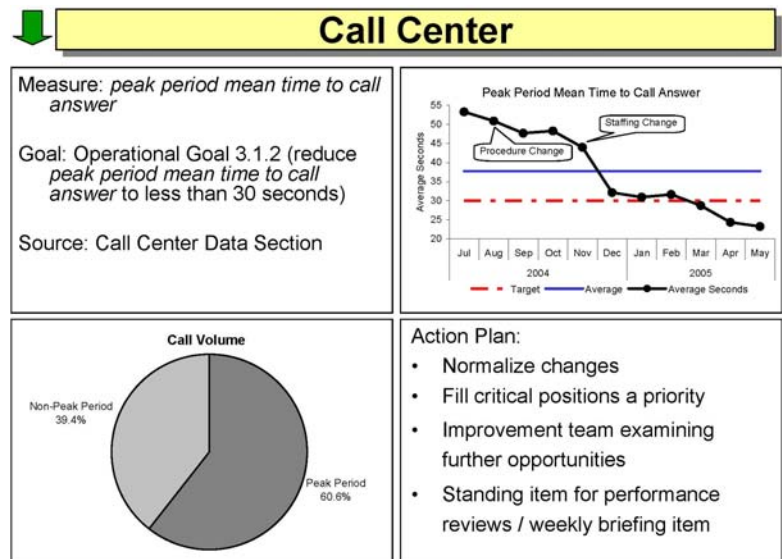

Best of all, QL Charts is not software. The charts are easy-to-use Excel-based worksheets that allow anyone to produce professional-looking charts in minutes.

### How do I use them?

They are rather simple to use. Just enter the data and automatically, calculations are performed, performance analyzed, and charts created and updated. Worksheets automatically compare expected to actual performance, perform tests of variation, show progress, report findings, calculate process capability, display fixed and variable targets, show cycles and trends, and much more.

### What do I get?

- ✓ 20 Excel charts templates with examples – variety of bar and line charts, pie chart, box plot chart, comparison charts, broken Y axis charts, survey charts, Gantt charts, histograms, Pareto chart, goal achievement chart, RUN charts (with histogram), and a variety of XmR charts (with histograms),
- ✓ 4 PowerPoint presentation templates,
- ✓ 13-page User's Guide containing chart descriptions and common uses, Excel commands, and worksheet tips.

### What does it cost? \$119.95

(Order online or by phone. Quantity discounts are available.)
